

ITP TURF TIPS

Shockwave for High Traffic Areas | Dismiss NXT Promo | Cricket Control

Shockwave & High Traffic Areas

As we reach July, we are about halfway through the renovation season. While most golf courses are focused on playing surfaces (greens, tees & fairways), another key area that needs to be looked at are high traffic areas such as cart path ends and edges.

This is the perfect area to use the **Shockwave**. With minimal damage, the **Shockwave** will vertically & horizontally decompact soils up to 10" in depth. This will help reduce compaction and help these areas survive the upcoming golf season.

Summer Weed Control

With the increase in rainfall we've seen this Spring and Summer, we are hearing about increased weed pressure at many local courses. Everyone knows about the arsenal of herbicides available to us to combat the unwanted weeds, but many times we forget to maximize efficacy of these applications. Here are our

5 tips when making Herbicide applications:

- Be sure spray equipment is properly calibrated
- Make sure spray water is at proper pH for product being sprayed
- Add an adjuvant that is recommended for the specific product being sprayed
- Remember to make follow up applications within the recommended windows
- Make sure your pre-emergent program is void of gaps

Bonus TIP: Adding an application of **Terra Bonne Stick-IT** will enhance herbicide efficiency and allow product to enter the plant faster!

Contact your ITP sales rep for more details

Cricket Control

Summertime can bring out the mole crickets, make sure you have some bait on hand ready when these pests pop up.

Available Cricket Control Options:

- Top Choice
- Carbl Mole Cricket Bait
- Chlorpyrifos 1% MC Bait

Choice Breakthrough

If you had a Chipco Choice application with us this year, remember you have a guarantee! Contact your ITP sales rep ASAP if you have a mole cricket breakthrough and we will get Top Choice sent to you.
